21

attribute of the dest_city result as a pre-condition to the bind operation:

```
    <bind targetElement="txtBoxDest"
5           value="//dest_city"
            test="/sml/dest_city[@confidence $gt$ 40]"
    />
```

The bind element is a simple declarative means of
10 processing recognition results on downlevel or uplevel browsers. For more complex processing, the reco DOM object supported by uplevel browsers implements the onReco event handler to permit programmatic script analysis and post-processing of the recognition
15 return.

2.2 Attributes and properties

The following attributes are supported by all browsers, and the properties by uplevel browsers.

2.2.1   Attributes

20 The following attributes of Reco are used to configure the speech recognizer for a dialog turn.

- **initialTimeout**: Optional. The time in
  milliseconds between start of recognition and
25   the detection of speech. This value is passed
       to the recognition platform, and if exceeded,
       an onSilence event will be provided from the
       recognition platform (see 2.4.2). If not
